Date: 25/04/2017 18:15:52

# BUILDING THE EUROPEAN DATA ECONOMY

Fields marked with \* are mandatory.

## **INTRODUCTION**

Data has become an essential resource for economic growth, job creation and societal progress. Data analysis facilitates better decision-making, innovation and the prediction of future events. Europe aims to exploit this potential without infringing the rights and freedoms of people or damaging economic investments made into generating data. Within this context, the Commission aims to foster an efficient, competitive single market for data services including cloud-based ones. It needs to identify the legal, economic, and regulatory challenges, and to launch a discussion with stakeholders on future action.

On 10 January 2017, the Commission adopted the "Building the European Data Economy" package consisting of a [Communication \(https://ec.europa.eu/digital-single-market/news-redirect/52038\)](https://ec.europa.eu/digital-single-market/news-redirect/52038) and a [Staff Working Document \(https://ec.europa.eu/digital-single-market/news-redirect/52044\)](https://ec.europa.eu/digital-single-market/news-redirect/52044). These policy documents give an overview of issues at stake, and of the context of this consultation. Respondents are invited to read them prior to completing the questionnaire.

## **Purpose**

The public consultation will help shape the future policy agenda on the European data economy. It will feed into a possible Commission's initiative in 2017 on Building the European Data Economy.

The objective of the consultation is to collect information on:

- whether and how local or national data localisation restrictions inhibit the free flow of data in Europe
- whether and to what extent digital non-personal machine-generated data are traded and exchanged
- the nature and magnitude of any barriers to accessing such data
- ways of tackling those barriers
- emerging Internet of Things and robotics liability challenges
- practices and issues relating to data portability, interoperability and standards

## **Context**

The "Building the European Data Economy" package addresses restrictions on the free flow of data, including legal barriers on the location of data for storage and/or processing purposes, and a series of emerging issues relating to data such as ownership, access, reuse, portability and liability.

While the questions on liability issues in this consultation are addressed in a data economy context, a [separate consultation \(http://ec.europa.eu/growth/tools-databases/newsroom/cf/itemdetail.cfm?item\\_id=9048\)](http://ec.europa.eu/growth/tools-databases/newsroom/cf/itemdetail.cfm?item_id=9048) separate consultation on the overall evaluation of the application of the Product Liability Directive (85/374/EEC) ([https://ec.europa.eu/eusurvey/EU Product Liability Directive \(85/374/EEC\)](https://ec.europa.eu/eusurvey/EU_Product_Liability_Directive_(85/374/EEC)).) is being launched.

This consultation does not cover any issues related to personal data protection. These are extensively regulated elsewhere, namely in the new EU data protection rules ([http://ec.europa.eu/justice/data-protection/reform/index\\_en.htm](http://ec.europa.eu/justice/data-protection/reform/index_en.htm)), as well as through the [review of the ePrivacy Directive \(https://ec.europa.eu/digital-single-market/news-redirect/52037\)](https://ec.europa.eu/digital-single-market/news-redirect/52037). Issues of access to and re-use of public sector information are excluded from this consultation because they will be tackled under the upcoming review of the Directive on the re-use of public sector information (2003/98/EC). (<http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2003:345:0090:0096:en:PDF>)

The Commission has already engaged in an extensive dialogue on the data economy with stakeholders, in the form of sector-specific (e.g. manufacturing and financial sectors) and cross-sector round-tables, workshops ([http://ec.europa.eu/newsroom/just/item-detail.cfm?item\\_id=34617](http://ec.europa.eu/newsroom/just/item-detail.cfm?item_id=34617)), conferences ([http://ec.europa.eu/information\\_society/newsroom/image/document/2016-48/17\\_october\\_high\\_level\\_conference\\_report\\_final\\_40080.pdf](http://ec.europa.eu/information_society/newsroom/image/document/2016-48/17_october_high_level_conference_report_final_40080.pdf)), bilateral meetings including targeted consultations of the Member States on data economy topics, and a public consultation (<https://ec.europa.eu/digital-single-market/en/news/public-consultation-regulatory-environment-platforms-online-intermediaries-data-and-cloud>) in which the data economy was one of a broader range of topics.

## **Targeted respondents**

This consultation targets:

- Businesses of all sizes

- Manufacturers and users of connected devices
- Operators and users of online platforms
- Data brokers
- Businesses commercialising data-based products and services
- Public authorities
- Non-governmental organisations
- Researcher and research organisations
- Consumers

As data collected by sensors are used in many areas, this consultation targets all sectors. Some of the sectors likely to be concerned are manufacturing, energy, automotive, health, consumer-facing commerce, Internet of Things (IoT), etc.

### Consultation period

10 January – 26 April 2017

Replies received after the closing date will not be considered.

### How to respond

You can reply in any EU language, even to the online English version of the questionnaire. The questionnaire in all of the other EU languages will be available as from 1 February 2017.

Only responses received through the online questionnaire will be considered for analysis. Questionnaires sent by e-mail or on paper will not be analysed except those due to accessibility needs of persons with disabilities (see below).

All questions and sections are optional. You can pause any time and continue later. You can download your contribution once you have submitted your answers.

Given the volume of this consultation, you can download a [PDF version \(http://ec.europa.eu/newsroom/document.cfm?doc\\_id=41218\)](http://ec.europa.eu/newsroom/document.cfm?doc_id=41218) before responding to the survey online. The PDF version includes all possible questions. When you fill the survey in online, you will not see all of the questions; only those applicable to your chosen respondent category and to other choices made when you answer previous questions.

The questionnaire is divided between 4 sections:

1. *Localisation of data for storage and / or processing purposes*
2. *Access to and re-use of non-personal data*
3. *Liability*
4. *Portability of non-personal data, interoperability and standards*

While you may want to contribute to the entire questionnaire, it is also possible for you to contribute only to the sections (s) that is / are relevant to you or your organisation.

### Accessibility for persons with disabilities

We accept questionnaires by e-mail or by post from people with disabilities and their representative organisations.

Please send either e-mail with your reply attached as Word, PDF or ODF document to [CNECT-CONSULTATION-DATA-ECONOMY@ec.europa.eu](mailto:CNECT-CONSULTATION-DATA-ECONOMY@ec.europa.eu)

or write to us at:

European Commission  
DG Communication Networks, Content & Technology  
Unit G1 – Data Policy and Innovation  
Euroforum Building  
10 rue Robert Stumper  
L-2557 Luxembourg  
Luxembourg

### Transparency

In the survey you will be asked whether you are responding as an individual or representing the views of an organisation. We ask responding organisations to register in the Transparency Register.

We publish the submissions of non-registered organisations separately from those of registered ones.

### Replies & next steps

We shall publish all contributions to the consultation unless non-publication is specifically requested in the 'About you' section of the questionnaire.

A short summary of the consultation results will be published on this page 1 month after the consultation closes. We shall issue a report with the qualitative analysis of the contributions in due course.

In case your response includes confidential data please provide a non-confidential version. Please read the Specific Privacy Statement below on how we deal with your personal data and contribution.

### Protection of personal data & privacy statement

[Protection of personal data \(https://ec.europa.eu/info/legal-notice\\_en#personaldata\)](https://ec.europa.eu/info/legal-notice_en#personaldata)

[Specific privacy statement \(http://ec.europa.eu/newsroom/document.cfm?doc\\_id=41220\)](http://ec.europa.eu/newsroom/document.cfm?doc_id=41220)

## About you

---

\* My contribution (Note that, whatever option chosen, your answers may be subject to a request for public access to documents under Regulation (EC) N°1049/2001):

- can be published with my personal information** (I consent to the publication of all information in my contribution in whole or in part including my name or my organisation's name, and I declare that nothing within my response is unlawful or would infringe the rights of any third party in a manner that would prevent publication.)
- can be published provided that I remain anonymous** (I consent to the publication of any information in my contribution in whole or in part (which may include quotes or opinions I express) provided that it is done anonymously. I declare that nothing within my response is unlawful or would infringe the rights of any third party in a manner that would prevent the publication.)

\* You are replying as:

- an individual in your personal capacity
- as a self-employed individual
- on behalf of a business/ organisation

\* First Name

Juergen

\* Last Name

Baensch

\* e-mail address

Juergen.Baensch@isfe.eu

\* Name of your organisation

Interactive Software Federation of Europe

Website of your organisation

www.isfe.eu

\* Contact details of your organisation

Juergen.Baensch@isfe.eu

\* Please indicate the place(s) of operation of your business/organisation.

- Austria
- Belgium
- Bulgaria
- Czech Republic
- Croatia
- Cyprus
- Denmark
- Estonia
- Finland
- France
- Germany
- Greece
- Hungary
- Italy
- Ireland
- Latvia
- Lithuania
- Luxembourg
- Malta
- Netherlands
- Poland
- Portugal
- Romania
- Slovakia
- Slovenia
- Spain
- Sweden
- United Kingdom
- Other

Please indicate the sector/s in which your business/organisation mainly operates:

- Manufacturing and processing
- IT services, including app/software developers
- Agriculture and Food
- Health and Care
- Energy and utilities
- Automotive and Transport
- Financial services/banking/insurance
- Retail/electronic commerce
- Wholesale trade
- Electronic communications
- Media, communication, entertainment
- Education
- Public sector

- Research
- Other

Which (if any) of these statements apply to you (it is possible to answer yes to several of these statements)?

- My organisation has significant business in the production and market commercialisation of sensor-equipped machines, tools, devices
- My organisation has significant business in internet-based platforms that also aim at generating data through the usage of such platforms by the various users
- My organisation is or is interested in accessing data held by an organisation which has significant business in the production and market commercialisation of sensor-equipped machines, tools, devices
- My organisation is or is interested in accessing data held by an organisation which has significant business in internet-based platforms that also aim at generating data through the usage of such platforms by the various users
- My organisation is an SME and/or a start-up

\* Is your organisation included in the Transparency Register?

If your organisation is not registered, we invite you to register here (<http://ec.europa.eu/transparencyregister/public/homePage.do?locale=en#en>), although it is not compulsory to be registered to reply to this consultation. See Why a transparency register ([http://ec.europa.eu/transparencyregister/public/staticPage/displayStaticPage.do?locale=en&reference=WHY\\_TRANSPARENCY\\_REGISTER](http://ec.europa.eu/transparencyregister/public/staticPage/displayStaticPage.do?locale=en&reference=WHY_TRANSPARENCY_REGISTER))?

- Yes
- No
- Not applicable

If yes, please indicate your Register ID Number.

20586492362-11

## 1. Localisation of data for storage and/or processing purposes

The main objective of this part of the questionnaire is to get detailed insights into the extent, nature and impacts of data localisation restrictions within the EU and what could constitute limited, justified grounds for such restrictions without unduly jeopardising the free movement of data within the EU (except for restrictions to the free movement of personal data for reasons connected with the protection of natural persons with regard to the processing of personal data. The Treaty on the Functioning of the European Union and the General Data Protection Regulation (GDPR) establish the free flow of personal data within the EU and set out the rules relating to that free movement).

Another important aspect is to find out to what extent businesses store or process data in multiple geographical locations within the EU and what are the reasons for this multiple location and, respectively, local storage or processing. The Commission also seeks respondents' views on the perceived impacts of the removal of data localisation restrictions within the EU. The Commission welcomes replies particularly from businesses, including SMEs, and public sector organisations.

Which of these statements apply to you in relation to data storage or processing?

- My organisation is a data service provider
- My organisation operates its own data infrastructure without using third-party services
- My organisation is a user of third-party data services
- My organisation is a scientific research organisation
- None of the above
- I don't know

Do you know about legislation or administrative rules or guidelines (including those adopted in the context of public procurement) requiring to store or process data in your or other EU countries (please see part 2 of the Staff Working Document linked to on the consultation webpage for the summary of data localisation restrictions identified so far)?

- Yes
- No

If yes, please specify:

- Legislative requirement
- Administrative rule
- Guidelines

If yes, the legislation, administrative rules or guidelines concern:

- Personal data for reasons other than the protection of natural persons with regard to the processing of personal data
- Business privately-held data
- Non-personal publicly-held data

Is your business or organisation required to comply with any of the measures?

- Yes
- No
- I don't know

Please describe briefly the requirement

*1,000 character(s) maximum*

ISFE member companies are subject to a variety of data localization requirements throughout Europe. Most commonly, they relate to restrictions imposed in the area of taxation, accounting and financial data. Typical examples are localisation restrictions for invoices, tax records, accounting books and financial registers. ISFE is concerned that the UK's withdrawal process from the European Union may add restrictions to that list and is strongly committed to preserve a free flow of data regime between the UK and the EU.

Is there any impact of such a measure, notably on your business or organisation?

- Impact on (you) providing a service to private entities
- Impact on (you) providing a service to public entities, e.g. following public procurement
- Impact on costs
- Impact on entering a new market
- Impact on launching a new product or service
- Impact on (your) ability to carry out scientific research projects/studies
- Other
- No impact
- I don't know

What is the impact (if any) of such a measure, notably on your business or organisation?

	Small	Medium	High
Impact on costs	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

If you identified an impact, what are the main additional costs or additional (regulatory) burdens:

- Storage of multiple copies
- Multiplication of servers
- Administrative costs
- Difficulties pertaining to scientific research
- Other
- I don't know

As regards the multiplication of servers, what is the impact?

- Small
- Medium
- High

As regards the multiplication of servers, what is the type of cost?

- One-off cost

- Recurring cost

As regards the multiplication of servers, please quantify the cost.

1,000 character(s) maximum

As regards the administrative costs, what is the impact?

- Small  
 Medium  
 High

As regards the administrative costs, what is the type of cost?

- One-off cost  
 Recurring cost

As regards the administrative costs, please quantify the cost.

1,000 character(s) maximum

ISFE represents a range of European member companies and has not sufficient data to quantify cost savings.

For your own organisation's purposes, do you store or process your data in multiple locations within the EU?

- Yes  
 No

If you answered yes, what are the main reasons?

- Economic  
 Business continuity  
 Access to performant technology  
 Improve security  
 Other

What is the importance of these economic reasons?

- Small  
 Medium  
 High

What is the importance of these business continuity reasons?

- Small  
 Medium  
 High

Please quantify the savings from multiple-country storage or processing

- More than 75%  
 More than 50%  
 Less than 50%

When providing IT-related services (e.g. cloud, applications, software, infrastructure, hosting, Over-The-Top, etc.), have your customers demanded that their data is stored or processed locally (in the same country as their relevant business establishment)?

- Yes  
 No  
 I don't know

In your opinion, should data localisation restrictions be removed within the EU?

- Yes
- No
- I don't know

In your opinion, what grounds would justify keeping data localisation restrictions within the EU?

- Public security
- Law enforcement needs
- Public policy (such as immediate availability of data for supervisory authorities)
- Public health (please note that patient data may already be covered by a free movement provision under the General Data Protection Regulation)
- Other

If you answered yes, how would the removal of the localisation restrictions be beneficial to your business or organisation?

- Faster start-up or scale-up of business
- Cost reduction
- Accessing more performant or secure technologies
- Entering new Member States market(s)
- Expanding sales to foreign market(s)
- Developing new products/services
- Other

How important this benefit would be (Faster start-up or scale-up of business)?

- Small
- Medium
- High

Please quantify if possible

*1,000 character(s) maximum*

ISFE represents a range of European member companies and has not sufficient data to quantify cost savings.

How important this benefit would be (Cost reduction)?

- Small
- Medium
- High

Please quantify if possible

*1,000 character(s) maximum*

ISFE represents a range of European member companies and has not sufficient data to quantify cost savings.

What kind of action at EU level do you consider appropriate to address the restrictions?

- The EU should not address the issue
- A legislative instrument
- Guidance on data storage / processing within the EU
- Increasing the transparency of restrictions
- Other
- I don't know

---

## 2. Access to and re-use of non-personal data

---

This part of the questionnaire aims to understand the data trading practices of businesses, and how all businesses, in particular SMEs, and other stakeholders access and trade non-personal data, and what are the perceived barriers to such trading and re-use of such data. The Commission seeks the views of businesses and other respondents on ways to enhance access to and re-use of data and data trading in Europe today.

## 2.1. Accessing data

This section is addressed to businesses and organisations of any size, and especially SMEs and start-ups which are seeking access to non-personal or anonymised data for running their businesses or developing new businesses. For consumer access issues, please see section 4.1 on data portability for non-personal. The aim is to find out whether and to what extent businesses and organisations have access to the data they need to develop or conduct their tasks, and furthermore to find out what role existing legislation plays in today's data markets, and whether there is a need to revise or introduce legislation to support the European data economy.

Do you currently depend to a significant extent on data resources that you acquire from others (for products or services you offer, for your internal business processes)?

- Yes
- No

Have you had difficulties in acquiring data from other business actors (i.e. limited or no access to the data) or have you been exposed to business practices that you consider unfair with respect to access to such data?

- Yes
- No

When acquiring data from other economic operators or when negotiating such acquisition: To what extent do you consider to be in a situation of equal bargaining power when negotiating data usage licences?

- To a great extent
- To some extent
- To a minor extent
- Not at all
- I don't know

When acquiring data from other economic operators or when negotiating such acquisition: How often do you consider having been exposed to a situation that in your view would amount to an abuse of dominant position (as defined in competition law)?

- Never
- Rarely
- A number of times
- Often
- I don't know

Does current competition law and its enforcement mechanisms sufficiently address potentially anti-competitive behaviour of companies holding or using data?

- To a great extent
- To some extent
- To a minor extent
- No
- I don't know

Have you entered contracts in which certain data was defined as a trade secret?

- Yes
- No

## 2.2. Holding and supplying data

This section is addressed mostly to businesses that hold non-personal or anonymised data not subject to significant data processing ("raw" data), in particular data collected by sensors embedded in machines, tools and/or devices and who are in a position to share them. The aim is to get more information about data licensing practices.

Do you believe existing EU legislation sufficiently protects investments made into data collection by sensors embedded in machines, tools and/or devices?

- Yes
- No
- Only in some scenarios
- I don't know

If you/your organisation hold/s raw data or data sets, do you license its usage to others?

- No / to a minor extent
- Only to sub-contractors that perform tasks closely related to the organisation's business processes
- Only to companies within an economic group (e.g. parent and subsidiaries in a corporate group/holding; affiliate, etc.)
- Only within IT innovation environments, collaborating with other companies on concrete projects
- Yes, to a wider range of players based on paying licences
- My company makes certain datasets accessible as open data (accessible online, e.g. through a web API), licensing conditions allow many re-use options and re-use is free of charge, at least for non-commercial re-use of the data
- Other

What are the reasons for this?

- I cannot see any secondary use for the data
- I fear misappropriation of the data by others
- I see legal risks or legal uncertainty about what I can lawfully do with the data (please specify the nature of this uncertainty) or about the control I can exert on data especially if data is shared with third parties
- It is a commercial/strategic business decision (e.g. the data have strategic value for my company in competition with others)
- I have not been able to identify the appropriate means to license usage of my data
- Other reasons

What kind of incentive would make you share data with a wider range of economic operators?

*1,000 character(s) maximum*

We would like further clarity from the Commission on what precisely is meant with raw' data. Video game content, including gameplay data, is not machine-generated, but always the result of direct human intervention.

Are you including the value of at least some of the data you hold as a business asset in your balance sheets?

- Yes
- No

Please explain why.

- This is not required by the applicable accounting/financing reporting standards
- I am not sure how to measure the value of the data I have or do consider that this would prove difficult
- Considerations of commercial strategy
- I have not given this a thought
- Other

### 2.3. Possible solutions

Sections 2.3.1 and 2.3.3 are directed at all respondents, including consumers and businesses. Section 2.3.2 is directed at businesses that deal with data collected by sensors embedded in machines, tools and/or devices. The aim is to receive input on what a possible future EU framework should look like to support a thriving, diverse and innovative European data economy.

#### 2.3.1. General objectives for a future EU framework for data access

To what extent do you agree with the following statements (1=not at all,2=to a minor extent, 3=neutral/I don't know, 4=to some extent, 5=to a great extent):

	1	2	3	4	5
--	---	---	---	---	---

Trading of non-personal machine-generated data should be enabled to a greater extent than it is today.	<input type="radio"/>				
The sharing of non-personal machine-generated data should be facilitated and incentivised.	<input type="radio"/>				
Investments made into data collection capabilities and data assets should be protected.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Sensitive business and confidential data should always be safeguarded.	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input checked="" type="radio"/>
Lock-in effects in the data market should be minimised, especially for SMEs and start-ups.	<input type="radio"/>				

### 2.3.2. Access for public sector bodies and scientific research

Could you agree to an obligation to license the use of (non-personal) data you hold for any of the following purposes (subject to conditions)?

- For the establishment of statistics by public statistical offices
- For government agencies for the prevention of public health or other specified risks
- For government agencies in order to address other societal challenges (e.g. improving urban planning, manage supply of energy)
- For scientific research that is funded from public resources
- Other
- I would not agree to such an obligation for any purpose

Do you consider there should be action at EU level to address access to such data for the entities mentioned in the previous question (the establishment of statistics by public statistical offices, government agencies for the prevention of public health or other specified risks, government agencies in order to address other societal challenges (e.g. improving urban planning, manage supply of energy), scientific research that is funded from public resources)?

- The EU should not address the issue
- Yes, but only voluntary measures (e.g. industry self-regulation)
- Yes, through legislative measures (for a scope to be defined)
- I don't know

### 2.3.3. Access for other commercial entities

The following questions ask for an assessment of a number of potential measures that might help to make more data held by one commercial entity available for re-use by another commercial entity.

Would you agree with the following statement: More data would become available for re-use if the Commission would issue guidance on how access, use and re-use of data should be addressed in contracts (data usage licences) – based on existing legislation (in particular the Trade Secrets Protection Directive, copyright legislation and the Database Directive)?

- Yes
- Sometimes
- No
- I don't know

Please explain.

*1,000 character(s) maximum*

We believe that the current legislative framework is sufficiently clear and does not require the drafting of specific guidelines on how to access, use and re-use data. In the video games industry, the ability to collect, process and protect gameplay data is of paramount importance for the development of new products and services. We have no indication that the current framework has created any damaging uncertainty that needs to be addressed.

What impacts (if any, including economic) on competition and innovation would you expect from the solution described in the previous question?

*1,000 character(s) maximum*

Further clarification of the legal framework would be of limited benefit to the video games industry.

Would you agree with the following statement: The optimal solution for making data collected by sensors embedded in machines, tools and/or devices available for re-use is to leave it entirely to the parties to decide (by contract) who should have the right to license the usage of these data, how and to whom.

- Yes
- Sometimes
- No
- I don't know

Please explain.

*1,000 character(s) maximum*

ISFE has no evidence that contractual relationships based on the current legislative framework would not allow to strike a fair balance between the parties to decide who should have the rights to license the usage of data.

What impacts (if any, including economic) on competition and innovation would you expect from the solution described in the previous question?

*1,000 character(s) maximum*

ISFE believes that the principle of contractual freedom has contributed to a very large extent to the high degree of innovation and competition and to strong economic growth in the European data economy. Consequently, any proposed measure that doesn't safeguard complete contractual freedom will generate a negative economic impact.

Would you agree with the following statement: More data would become available for re-use if more data holders used Application Programming Interfaces (APIs) to facilitate access to the data they hold, and these APIs were designed and documented in a way easy to use by third party application developers.

- Yes
- Sometimes
- No

- I don't know

What impacts (if any, including economic) on competition and innovation would you expect from the solution described in the previous question?

1,000 character(s) maximum

Would you agree with the following statement: More data would become available for re-use if legislation would define a set of (cross-sector or sector-specific) non-mandatory contract rules for B2B contracts, possibly coupled with an unfairness control in B2B contractual relationships) for allocating rights to access, use and re-use data collected by sensors embedded in machines, tools and/or devices were defined.

- Yes  
 Sometimes  
 No  
 I don't know

Please explain.

1,000 character(s) maximum

Today, the data economy covers practically every sector and the diversity of situations whereby data is contractually negotiated is endless. These contracts usually do not allow for a one-size fits all solution and involve many different parties along the value chain. We have no evidence of imbalances in negotiating powers that would exist in our sector.

What impacts (if any, including economic) on competition and innovation would you expect from the solution described in the previous question?

1,000 character(s) maximum

We caution against overly-prescriptive rules that may have a counterproductive effect on the data economy and discourage rather than incentivise innovation and investment. We would advise to investigate first where such problematic practices exist and limit the scope of regulative interventions to these specific cases only.

Would you agree with the following statement: More data would become available for re-use if a set of recommended standard contract terms were to be drafted in close collaboration with stakeholders.

- Yes  
 Sometimes  
 No  
 I don't know

Please explain.

1,000 character(s) maximum

see above

What impacts (if any, including economic) on competition and innovation would you expect from the solution described in the previous question?

1,000 character(s) maximum

see above

Would you agree with the following statement: More data would become available for re-use if a company holding data which it protects through technical means against illicit misappropriation had civil law remedies against such misappropriation (e.g. the right to seek injunctions, market exclusion, or to claim damages).

- Yes  
 Sometimes  
 No  
 I don't know

Please explain.

1,000 character(s) maximum

Illicit misappropriation of data can sufficiently be addressed in contractual relationships which allow for the necessary flexibility to deal with the variety of situations in the digital economy.

What impacts (if any, including economic) on competition and innovation would you expect from the solution described in the previous question?

1,000 character(s) maximum

While the solution suggested in the statement above will not provide added protection to our sector we want to caution against the potential impact of such "purely defensive rights" on the existing legal framework and in particular on existing property rights. Potential impacts should be carefully considered.

Would you agree with the following statement: More data collected by sensors embedded in machines, tools and/or devices would become available for re-use if both the owner or user of the machine, tool or device and the manufacturer share the right to license the use of such data.

- Yes  
 Sometimes  
 No  
 I don't know

Please explain.

1,000 character(s) maximum

ISFE is not in favour of the idea of creating a new data producer right with the objective of enhancing the tradability of non-personal data as an economic good. If a data producer right is to be created as a right "in rem" and consequently be enforceable independent of contractual relations the negative impact of such a measure on the data markets may be enormous. It is unclear why a data producer right is easier applicable than contractual solutions to situations where a variety of stakeholders represent different interests along the complex data economy value chain.

What impacts (if any, including economic) on competition and innovation would you expect from the solution described in the previous question?

1,000 character(s) maximum

The impact of the introduction of such a right on the existing legal safeguards in the current EU acquis has not been documented in the Commission's Communication and Staff Working Document. A detailed impact assessment on how this may impact the current economic balance that was established on contractual relationships has not been provided.

Would you agree with the following statement: More data would become available for re-use if the companies active in the production and market commercialisation of sensor-equipped machines, tools or devices were awarded an exclusive right to license the use of the data collected by the sensors embedded in such machines, tools and/or devices (a sort of sui generis intellectual property right).

- Yes  
 Sometimes  
 No  
 I don't know

What impacts (if any, including economic) on competition and innovation would you expect from the solution described in the previous question?

1,000 character(s) maximum

see above

Would you agree with the following statement: More data would become available for re-use if the persons or entities that operate sensor-equipped machines, tools or devices at their own economic risk ("data producer") were awarded an exclusive right to license the use of the data collected by these machines, tools or devices (a sort of sui generis intellectual property right), as a result of the data producer's operation, to any party it wishes (subject to legitimate data usage exceptions for e.g. manufacturers of the machines, tools or devices).

- Yes
- Sometimes
- No
- I don't know

Please explain.

*1,000 character(s) maximum*

see above

What impacts (if any, including economic) on competition and innovation would you expect from the solution described in the previous question?

*1,000 character(s) maximum*

see above

To what extent would you agree to an obligation to license for the re-use of data generated by machines, tools or devices that you have commercialised under fair, reasonable and non-discriminatory (FRAND) terms?

- To a large extent
- To some extent
- To a minor extent
- Not at all

To what extent would you agree to an obligation to license for the re-use of data generated in the context of your online platform through its users under fair, reasonable and non-discriminatory (FRAND) terms?

- To a large extent
- To some extent
- To a minor extent
- Not at all

### 3. Liability

---

This part of the questionnaire aims to understand the level of awareness, as well as the respondents' experiences and issues related to liability for products and services coming out of Internet of Things (IoT) technologies and autonomous systems. The questions are also meant to gather evidence for a proper assessment of the adequacy of the Product Liability Directive (85/374/CEE) (<http://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:31985L0374&from=EN>) to respond to IoT and robotics liability challenges. The Commission seeks the views of producers and users of IoT technologies and autonomous systems in this section.

#### 3.1. Extra-contractual liabilities: IoT and robotics products and services

##### Questions for producers/suppliers/manufacturers

As a producer/supplier: please indicate which new IoT and/or robotics technological developments you deal with.

- Non-embedded software/mobile apps
- Advanced and new sensor equipment
- Smart medical devices
- Robots, e.g. for care, surgery, industrial robots, other
- Automated cars
- Smart objects, i.e. thermostats, fridges, watches, cars
- Drones
- Other

As producer of IoT/robotics devices, did you ever experience problems in not knowing in which category (product/service) to classify the device in order to comply with a specific liability regime on provision of services or manufacturing of products?

- Yes, to a significant extent
- Yes, to a moderate extent
- No, I never experienced this problem
- I don't know

Do you, as a producer, take into account the possibility of being held liable for potential damages when pricing IoT/robotics devices?

- Yes
- No

Have you ever been held liable for damage caused by your IoT/robotics defective device?

- Yes
- No
- I don't know

As a producer, do you have a specific insurance for IoT/robotics products to cover your liability in case of compensation?

- Yes
- No
- I don't know

#### Questions for consumers/end-users

As a consumer, have you suffered damage due to a defective IoT/robotics device?

- Yes
- No

As a consumer/user have you ever experienced a software security problem (e.g. failure of the software, cyber-attack) when using your IoT/robotics product?

- Yes
- Yes, but I do not know the exactly problem or cause.
- No

As a consumer/user of an IoT/robotics device, how easy it is to update the software of your device?

- Easy
- I can manage
- It is too inconvenient, complex, difficult
- My device is automatically updated/patched by the manufacturer or developer
- I do not have to update it
- Other

As a consumer, what (if anything) makes you reluctant to buy IoT/robotics products or services?

- They are technologically too complicated to use
- Price
- I am not interested
- Privacy risks
- Software security problems, Cyber security risks
- Legal uncertainty: I didn't know whether I would receive a compensation in case of damage
- In case of damage, it is difficult to understand where the cause of damage lies
- No reluctance at all
- Other

Do you think IoT/robotics products and services should be equipped with an event data recorder to track what the device was doing when the damage occurred?

- Yes
- No
- I don't know

In the EU country where you live, are there specific rules on liability for damage caused by the new technological developments, such as IoT/robotics products? If you are aware of such rules, please indicate them.

*1,500 character(s) maximum*

In your opinion, who should bear the liability in case of damages caused by defects or malfunctioning of a smart device which combines tangible goods (a car), digital goods (an app) and services (e.g data services)?

- The producer of the physical device
- The provider of the digital good (software and/or app)
- The producer of the physical device jointly with the provider of the digital good (software and/or app)
- The attribution of liability is better dealt through contracts on a case-by-case basis
- To be established on a case-by-case basis based on the best positioned to avoid risks
- To be established on a case-by-case basis based on the entity generating the highest risks
- Other

As end-user (consumer/company) active in the data economy, have you directly experienced/entered into agreements, or are you aware of contracts that reduce substantially the liability of providers of IoT products/services/robots?

*1,000 character(s) maximum*

What type of contractual liability limitations have you faced (e.g. on errors, accuracy and reliability of data, defects, functionality and availability of service, risk of interception of information, cyber-attacks)?

*1,000 character(s) maximum*

Which exclusions (damage to property, financial loss) or limitations of damages (e.g. caps) connected in any way with the use of IoT products/services/robots have you experienced or are you aware of?

*1,000 character(s) maximum*

Do you think the attribution of liability in the context of IoT/Autonomous systems products and services can adequately be dealt with through contracts?

- Yes
- Partially
- No

### **3.2. Possible options and a way forward (both for consumers/end users and producers of IoT/Robotics devices)**

Do you think a risk management approach in which the party that is best placed to minimise or avoid the realisation of the risk (e.g. the manufacturer of the IoT device, or the software designer) could be a way forward?

- Yes
- No
- I don't have information about what a risk management approach would entail and would thus prefer not to answer
- I don't know

In your opinion, who should bear the liability in case of damages caused by defects or malfunctioning of a smart device which combines tangible products, digital products and services?

*1,000 character(s) maximum*

What type of liability, contractual or extra-contractual, is, in your opinion, the most consumer-friendly way to deal with damages caused by defects or malfunctioning in smart devices, which combine tangible products, digital products and services?

- Contractual
- Extra-contractual
- None of them
- I do not know

Do you think that the liability in relation to smart devices combining products and services require an ad hoc approach at EU level?

1,000 character(s) maximum

Independently of who is considered liable, should there be a liability cap, i.e. an upper bound to the compensation of damages?

- Yes, for all IoT products
- Yes, but only for specific products in the experimentation/testing phase
- Yes, but only for specific products abiding by strict safety standards
- No
- I do not know

What is your opinion on the idea of best practices guidelines and/or expected care and safety standards that, if fulfilled, would automatically exclude/limit liability?

- I agree, for all IoT products
- I agree, but only for specific products in the experimentation/testing phase
- I agree, but only for product performing automated actions or taking independent decisions
- I do not agree
- I do not know

Is there a need for mandatory cyber insurance?

- Yes, for all IoT products
- Yes, but only for specific products in the experimentation/testing phase
- Yes, but only for product performing automated actions or taking independent decisions
- No
- I do not know

Do you feel protected by the current legal framework (both Business-to-Business and Business-to-Consumer) for algorithms, e.g. in case it can be proven that an accident has been caused by a bug in the algorithm?

- Yes
- No
- I don't know

Should some sorts of standard certification or testbedding be envisaged for algorithm based services?

- Yes
- No
- I don't know

Who should be liable for defects or accidents caused by products embedding open algorithms, i.e. algorithms developed through cooperative platforms?

- The producer
- The user
- The participants to the cooperative platform jointly
- Nobody
- Other

---

## 4. Portability of non-personal data, interoperability and standards

---

### 4.1. Portability of non-personal data

This section is directed towards all respondents, including consumers, organisations and businesses. The objective of this section is to explore business situations where portability of non-personal data can unlock opportunities and/or eliminate blockages in the data economy, as well as the effects of such conditions on all the concerned actors.

Are you using or have you used services which allow you to port or retrieve non-personal data that you had previously provided?

- Yes  
 No  
 I don't know

What advantages does/would portability of non-personal data bring to you/your business?

- Build value deriving from these data  
 Trade data on data trading platforms  
 Give access to third parties to the data  
 Switch easily service provider without losing these data  
 Other

Is your business offering portability of non-personal data to its business or individual clients?

- Yes  
 No

Are you aware of other good examples of services offering data portability? Please specify.

*1,000 character(s) maximum*

ISFE is not aware of any examples of portability services for non-personal data in the video games sector.

If you are a business user of cloud services or online platforms: Have you experienced difficulties in switching providers?

- Yes  
 No  
 I was not interested in switching providers

Do you see a specific need for businesses to receive non-personal data in a machine-readable format, as well as the right to licence the use of such data to any third party (i.e. the right of data portability under article 20 GDPR extended to any user and to non-personal data)?

- Yes  
 No  
 I don't know

If you have further comments on portability rights, please insert them below.

*1,000 character(s) maximum*

ISFE firmly opposes the expansion of portability rights under the General Data Protection Regulation to non-personal data. Such a right may interfere with the carefully-negotiated settlement under the GDPR, particularly before it has even come into force. Its implementation may produce learnings that could be relevant for non-personal data as well.

What are the possible effects of introducing a portability right for non-personal data regarding cloud services? Please consider positive and possible adverse effects, and consequences for your business and, more generally, for the user of the cloud service as well as the service provider and other concerned actors.

*1,500 character(s) maximum*

What are the possible effects of introducing a portability right regarding non-personal data generated by sensor-equipped machines, tools and/or devices? Please consider positive and possible adverse effects, and consequences for your business and, more generally, for the user of the services as well as manufactures, service providers and other concerned actors.

*1,500 character(s) maximum*

What are the possible effects of introducing a portability right for non-personal data regarding online platforms? Please consider positive and possible adverse effects, and consequences for your business and, more generally, for the business user of the platform, consumers, intermediary (data) services, the online platform and other concerned actors.

1,500 character(s) maximum

We believe that mandatory portability rights for non-personal data regarding online platforms will not bring economic benefits as it will reduce appetite for investment and competition between such platforms. Portability of non-personal data may require that companies have to share with their competitors their method of collecting, structuring, and using this data. Portability will expose companies to security risks and will impose strict data format mandates that will discourage companies to innovate and invest in new ways of collecting and processing data. We also want to caution against the technical feasibility of such portability rights in a rapidly evolving digital environment.

#### 4.2. Interoperability and standards

This section is primarily directed towards businesses and organisations. The objective of this section is to get the stakeholders' opinions on the best approaches to technically support data portability and access to data.

As a provider of cloud services, do you provide "standard-compliant" solutions?

- Yes  
 No

As a user of cloud services, do you give preference to "standard-compliant" solutions?

- Yes  
 No

For which reasons would/do you use a "standard-compliant" cloud solution

- Data portability of non-personal data  
 Service interoperability  
 Privacy, data protection compliance & Security  
 Cloud management  
 Service Level Agreement  
 Other

What do you consider as a priority for facilitating access to data and to improve its technical and semantic discoverability and interoperability?

- Common metadata schemes (including differentiated access, data provenance, quality)  
 Data catalogues  
 Use of controlled (multilingual) vocabularies  
 Common identifiers  
 Other

What technical instruments should be used for promoting/implementing your priorities suggested in the previous question?

- Definition of new standards  
 Improvement of existing standards  
 Recommendations

What legal instruments should be used for promoting/implementing your priorities suggested in the same question?

- EU regulation  
 Guidelines  
 Support actions  
 Other

Do you see the need for the definition of a reference architecture recommending a standardised high-level framework identifying interoperability interfaces and specific technical standards for facilitating seamless exchanges across data platforms?

- Yes  
 No

---

## Additional contribution

---

Please feel free to upload a concise document, such as a position paper. The maximal file size is 1MB.

Please note that the uploaded document will be published alongside your response to the questionnaire which is the essential input to this open public consultation. The document is an optional complement and serves as additional background reading to better understand your position.

If you wish to add further information - within the scope of this questionnaire - please feel free to do so here.

*2,000 character(s) maximum*
